

RA positions available in NanoBio research

The Nanoelectronics Laboratory of Prof. Andrew Steckl at the University of Cincinnati is looking for new graduate students who are interested in nanobiotechnology research for their PhD degree. The positions are for a growing program in Biotronics: Device Using (or Inspired by) Biomaterials. Projects include liquid state electronic devices using electrowetting, DNA bio-photonics and nanostructure fabrication by electrospinning.

Interested students should send their resume to Prof. Steckl at a.steckl@uc.edu.
